

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	30 June 2026
Team ID	
Project Name	Cosmetic Insights: A Tableau-Based Analysis of Skincare Trends and Consumer Preferences
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team Members: Karun Kumar Kondela (Team Lead), Yadala Pradeep Kumar, Bondada Sugandh Abhishek, Sri Uma Sai Suman Chakka, Alla Lohith Lakshmi Reddy

Our team conducted a collaborative brainstorming session to identify a real-world problem in the cosmetics industry that could be solved using data analytics and visualization. During the discussion, we explored various challenges faced by consumers while selecting skincare and cosmetic products, such as comparing products across brands, understanding category-wise availability, analyzing product prices, and choosing products suitable for different skin types.

After examining the cosmetics dataset, we observed that it contains valuable information including product name, brand, category, price, ingredients, ratings, and skin-type suitability. We identified that this data could be transformed into meaningful business insights through interactive dashboards and visual storytelling.

Based on the team's discussion, we finalized the following problem statement:

Define your problem statement: What problem are you trying to solve? Framed as a How Might We statement, this became the focus of the brainstorm.

PROBLEM

How might we help skincare buyers and brand analysts compare 1,472 cosmetic products across 116 brands and 6 categories quickly, visually, and on the dimensions that matter most (skin type, price, rating)?

Key rules of brainstorming followed: stay on topic, defer judgment, go for volume, encourage wild ideas, listen to others, and be visual where possible.

Step-2: Brainstorm, Idea Listing and Grouping

Each team member individually listed ideas addressing the problem statement. Raw ideas generated:

- Which brands have the largest product range (count of products)?
- How are products distributed across the 6 categories?
- Which brands dominate each category?
- Top 10 brands by overall product count.
- What is the average price per brand and per category?
- Is there a relationship between price and customer rank?
- Which brands offer the best rating for their price point?
- Total revenue potential by category (price as proxy).
- How many products suit each skin type (Dry, Oily, Normal, Combination, Sensitive)?
- Which brands have the most products suitable for all skin types?
- Category-wise distribution of products suitable for combination skin.
- Total count of products by skin type across the catalogue.
- Which products/brands have the highest average rank (rating)?

Grouped Ideas (clustered by theme)

Theme (Cluster Label)	Grouped Ideas
Brand & Category Analysis	Brand product count, category distribution, brand dominance per category, top 10 brands
Price Analysis	Average price per brand/category, category-wise revenue (price proxy)
Skin-Type Suitability	Per-skin-type product counts, brands suitable for all skin types, category-wise combination-skin distribution
Price vs. Rating	Price-to-rank relationship, best-rated brands per price point

Step-3: Idea Prioritization

The team placed each grouped idea on an Importance vs. Feasibility grid to decide which ideas to build now versus park for future scope.

Idea	Importance	Feasibility	Decision
Top 10 brands by product count	High	High	Build now
Brand vs. average price	High	High	Build now
Category-wise product distribution	High	High	Build now

Idea	Importance	Feasibility	Decision
Skin-type suitability breakdown (5 types)	High	High	Build now
Price vs. rank scatter plot	High	Medium	Build now
Top 10 brands suitable for all skin types	Medium	High	Build now
Ingredient-level safety scoring	Medium	Low	Future scope
Personalized product recommendation engine	Medium	Low	Future scope

Outcome

The high-priority ideas from this session were carried into the Customer Journey Map and Solution Requirement documents, and implemented as the 18 Tableau worksheets and storyboard described in the Project Development Phase.
