

Project Design Phase

Proposed Solution Template

Date	30 June 2026
Team ID	
Project Name	Cosmetic Insights: A Tableau-Based Analysis of Skincare Trends and Consumer Preferences
Maximum Marks	2 Marks

Proposed Solution Template:

Project team's proposed solution information:

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Buyers and brand analysts cannot easily compare 1,472 cosmetic products across 116 brands and 6 categories on the dimensions that matter most (skin-type suitability, price, brand, rating), because the raw data is unstructured and scattered.
2	Idea / Solution description	An interactive Tableau workbook built on the cosmetics dataset, containing 18 worksheets (brand counts, category distribution, skin-type suitability, price vs. rank, etc.) and a guided storyboard (Story 1), letting users filter and compare products visually.
3	Novelty / Uniqueness	Unlike a static spreadsheet or written report, the solution is interactive — a user filters by skin type or category and immediately sees relevant brands and price points, with all 18 views drawing from one consistent data source for accuracy.
4	Social Impact / Customer Satisfaction	Helps buyers (including those with Sensitive or Dry skin, which have comparatively fewer suitable product options at 756 and 904 respectively) make better-informed purchase decisions, reducing wasted spend and product-fit frustration.
5	Business Model (Revenue Model)	Not applicable — this is an academic/internship analytics project with no direct revenue model. The deliverable (workbook + dashboards) is shared via Tableau Public and GitHub for review.
6	Scalability of the Solution	The single federated Tableau data source supports adding new product rows, brands, or categories without redesigning the existing 18 worksheets, allowing the catalogue to grow over time.
