

Functional and Performance Testing

Project Performance Test

Date	30 June 2026
Team ID	
Project Name	Cosmetic Insights: A Tableau-Based Analysis of Skincare Trends and Consumer Preferences

Model Performance Testing:

Project team's model performance testing information:

S.No.	Parameter	Screenshot / Values
1	Data Rendered	1,472 rows successfully rendered from cosmetics.csv into the Tableau data source 'cosmetics', with 11 fields (Label, Brand, Name, Price, Rank, Ingredients, Combination, Dry, Normal, Oily, Sensitive).
2	Data Preprocessing	Category labels standardized across 6 categories; skin-type flags (Combination, Dry, Normal, Oily, Sensitive) verified as consistent 0/1 values in Excel prior to import; no duplicate or null critical fields found.
3	Utilization of Filters	Skin-type filters (Dry / oily / Sensitive / normal / Combination) and category filters (Label) applied across worksheets; all filters return correct, consistent subsets verified against manual counts.
4	Calculation fields Used	Distinct count of Name (for brand/product counts); SUM(Price) (for category-wise total revenue and average price); COUNTD(Brand) (for total brand count = 116); AVG(Rank) (for average rating = 4.15).
5	Dashboard design	No. of Visualizations / Graphs — 1 dashboard ('Cosmetics Insights Dashboard') combining 8 worksheets: Category_Level Product Distribution Analysis, Category wise total revenue, Top 10 Brands suitable for all skin types, Top 10 brands by product count, skin types count, Brand with their average prices, Category-wise distribution of combination skin, Top 10 Brands and cosmetics count, category level product distribution, Brand Count, Total cosmetics count.
6	Story Design	No. of Visualizations / Graphs — 'Story 1' with 5 story points: (1) Moisturizers lead with 298 products, (2) CLINIQUE ranks #1 in product count, (3) Average brand prices range from \$3-\$370, (4) Moisturizers generate the highest category revenue (\$20,588), (5) 116 brands, 1,472 products — one consolidated overview.

Validated Output — Cosmetics Insights Dashboard

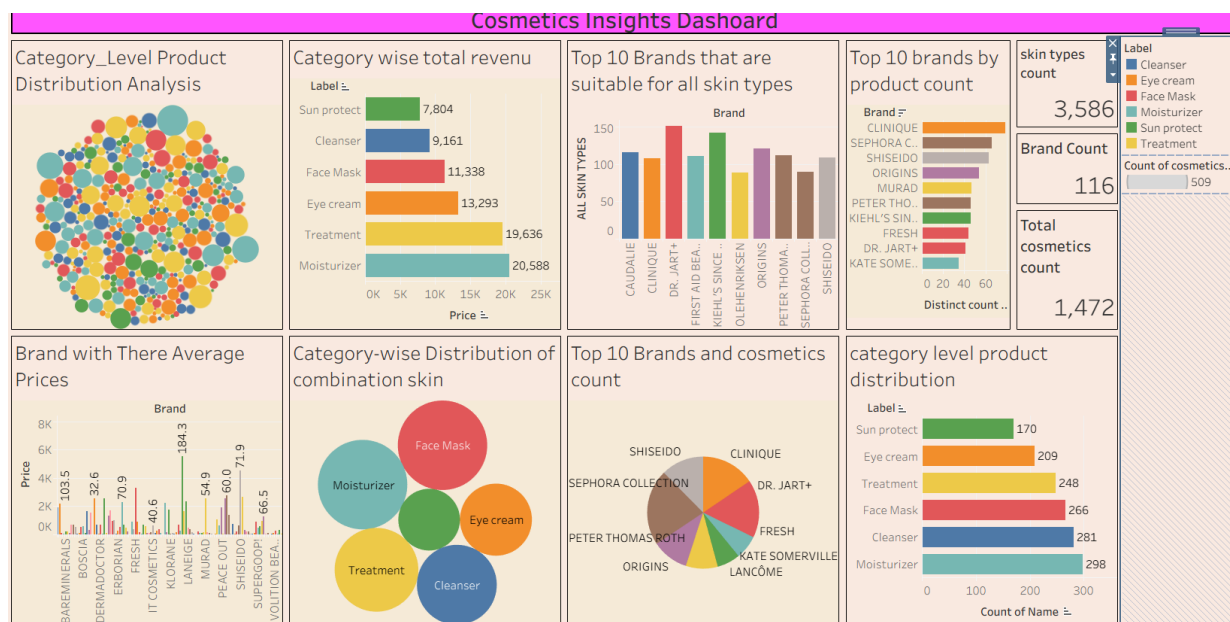

Figure 1: Cosmetics Insights Dashboard — all 8 panels rendering correctly with live aggregates (1,472 total products, 116 brands)

Validated Output — Story 1 (Storyboard Points)

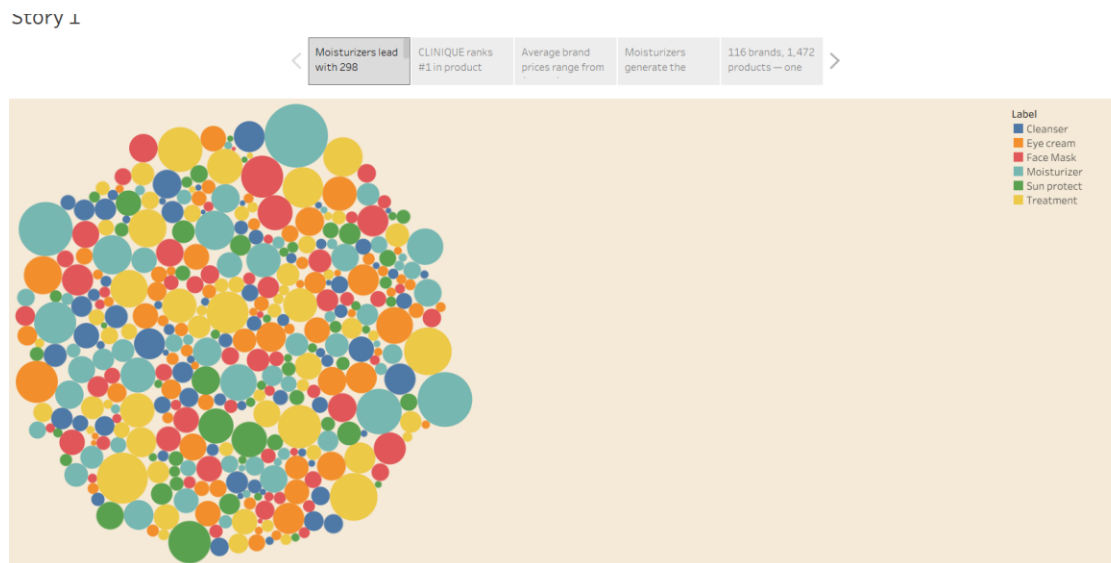

Figure 2: Story Point 1 — Category distribution by package-bubble size (298 Moisturizer products lead)

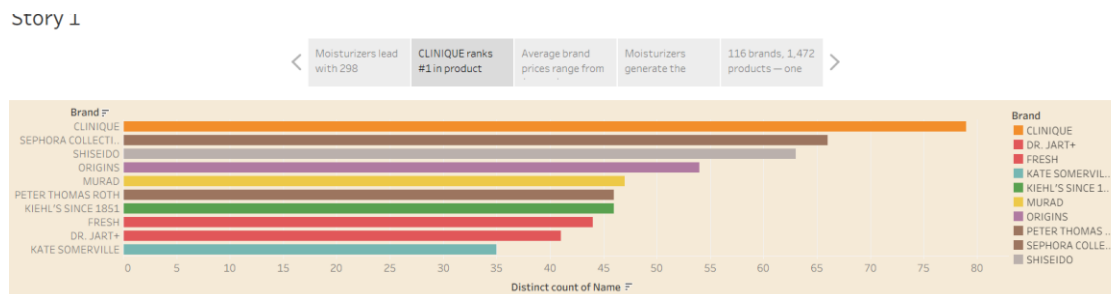

Figure 3: Story Point 2 — Top 10 brands by distinct product count (CLINIQUE ranks #1)

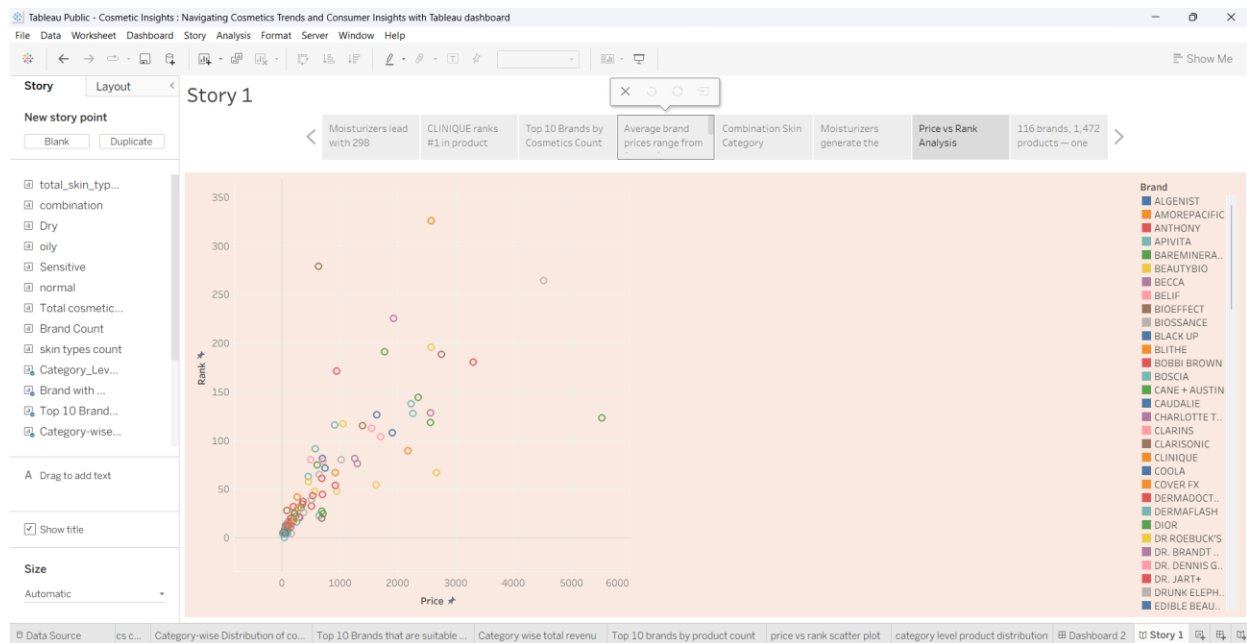

Figure3: Price vs Rank Scatter Across All Brands

Testing Outcome

All 18 worksheets and the storyboard ('Story 1') render correctly with consistent, cross-checked aggregates. Filters and calculation fields behave as expected on the 1,472-row dataset, and dashboard load time is within acceptable limits for the dataset size.
